

Alan Zayon da Silva Maciel

Full-Stack .NET Developer | C# | ASP.NET Core | Angular | Vue | REST APIs

Fortaleza, Ceará, Brazil | +55 (85) 99168-9582 | alanzayon72@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

Full-Stack developer focused on C#, .NET 8/9, and ASP.NET Core, building REST APIs and Angular/Vue interfaces for corporate event, access-control, and fiscal products. I work end-to-end: business rules, per-tenant data isolation, asynchronous processing (queues and background jobs), and system integrations — including webhooks, DAS/DARF/OFX reconciliation, and flows tied to turnstiles and kiosks. Seeking Full-Stack .NET / C# roles where I deliver the API, the operations UI, and end-to-end flow reliability.

Technical Skills

Backend: C#, .NET 9, .NET 8, ASP.NET Core, REST APIs

Frontend: Angular 19, Vue 3, TypeScript, HTML, CSS; React.js (when the product requires it)

Data: PostgreSQL, SQL Server, MongoDB, Redis

Messaging & processing: Azure Service Bus (queues and topics), Hangfire, background jobs; BullMQ (Node.js)

Cloud & DevOps: Docker, GitHub Actions, CI/CD, AWS S3, Git

Engineering: multi-tenancy, RBAC, idempotency, webhooks, fiscal reconciliation (DAS/DARF/OFX)

Also used: Node.js, NestJS

Work Experience

Full-Stack Developer — ASC Solutions

Rio de Janeiro, Brazil | February 2026 – Present

- Built the facial-biometrics event platform in Angular 19, C#, .NET 9, and SQL Server, including a production partner API for face queries with token auth, IP whitelist, and rate limiting — each tenant can access only their own data.
- Moved imports of up to 30,000 records from the browser into background jobs with validation, failure reports, and batch resume, freeing the operations UI from heavy processing.
- Implemented Azure Service Bus publishing (queue or topic per event) to decouple the event flow from local access databases used by turnstiles, including after ticket purchase.
- On the members club, implemented idempotency for payment webhooks (paid, canceled, refund) and a recurring-card job for overdue installments.

Full-Stack Developer (Freelance) — Mitfokus Medical Accounting

Campinas, Brazil · Remote | February 2026 – Present

- Evolved the production fiscal product (Vue 3, .NET 8, C#, PostgreSQL), replacing one-off per-client mapping with reusable chart-of-accounts profiles.
- Moved PDF/OFX processing to Hangfire, with files on AWS S3 and Redis cache — batches of up to 10 files, uploads up to 100 MB, and OFX files with tens of thousands of transactions.
- Implemented OFX classification by groups, a virtualized UI list, and unit/integration tests; automated Simples Nacional, DCTFWEB (INSS/IRRF), and annual partners' drawings history with rules by tax ID and bank.

Full-Stack Developer (Freelance) — Agilize Accounting

Salvador, Brazil · Remote | May 2025 – October 2025

- Built end-to-end DAS/DARF and OFX reconciliation in Vue, .NET 8, C#, and PostgreSQL, generating Domínio-standard CSV with configurable debit/credit codes.
- Handled SGML OFX with 8,000+ transactions, with pending items and term reuse — ~10 hours/month less manual posting, per client measurement.

Full-Stack Developer — Municipality of Maranguape

Maranguape, Brazil | November 2024 – November 2025

- Built the public-servant staffing system in React, Node.js, TypeScript, and MongoDB for up to 10,000 people — departments, nominations, appointed positions, and dashboards for chiefs of staff and teams.
- Optimized queries with MongoDB aggregations, cutting API response time from ~1.6 s to 50 ms; branded reports and media on AWS S3. Later evolution (after the municipal role) moved the public API to multi-tenant ASP.NET Core 10 with Redis, Hangfire, and per-tenant isolation.

Personal Projects

GameScore — github.com/AlanZayon/GameScore-Project

Next.js 16 · React 19 · ASP.NET Core 10 · EF Core · Hangfire · PostgreSQL · Redis · Docker

- Web platform to discover and rate games by player recommendations. Next.js + ASP.NET Core 10 modular monolith with Wilson-score ranking, full-text search on PostgreSQL, Hangfire jobs, and shared scoring maths with golden tests (migrated from NestJS).

Smart RPG Campaign Generator — github.com/AlanZayon/python-gerador-inteligente-RPG

Python · Flask · Redis · PostgreSQL · AWS S3 · FAISS (RAG) · JWT

- Tool for GMs: turns a rules PDF into a playable campaign (overview, sessions, appendix). Async API with Redis queue, worker (RAG/FAISS → plan → writing → review), job idempotency, and Markdown published to S3.

Education

Associate Degree in Systems Analysis and Development — Estácio, expected July 2027

Languages

Portuguese — Native | English — Technical reading and writing (docs, PRs, and APIs)
