Back-End Developer focused on building scalable APIs and efficient data processing systems using Node.js, TypeScript, and .NET. Experienced in financial, tax, and government systems with a strong emphasis on performance optimization, automation, and large-scale data processing. Proven track record of reducing API latency by 32x and eliminating 90% of manual errors.

PROFESSIONAL EXPERIENCE

Agilize Contabilidade — *Back-End Developer (Freelancer)*

MAY 2025 – OCT 2025

- Developed a financial reconciliation system for tax documents (Brazilian tax payments) and OFX bank files using .NET 8 and PostgreSQL.
- Reduced manual workload** by approximately 10 hours per month through automation of repetitive financial processes.
- Built batch processing pipelines supporting high volumes — OFX files with over 8,000 transactions and batches of up to 50 tax documents — with data validation, error handling, and fault tolerance.
- Implemented automated classification logic and reconciliation processes, reducing manual categorization and **eliminating approximately 90% of manual errors**.
- Leveraged AI-assisted tools for data validation and interpretation, accelerating development, migrating systems to .NET, and generating technical documentation for financial workflows.

TECHNICAL SKILLS

Backend: Node.js, TypeScript, Express.js, .NET 8, C#, REST APIs, SOLID, Clean Architecture

Databases: PostgreSQL, MongoDB, SQL, NoSQL modeling, query optimization

DevOps & Cloud: Docker, GitHub Actions (CI/CD), AWS S3, Redis, Git

Frontend: React.js, Vue.js, TypeScript

AI & Automation: AI-assisted back-end development, prompt engineering, LLM API integration, technical documentation generation

EDUCATION

Associate Degree in Systems Analysis and Development
Estácio University — Expected graduation: July 2027

LANGUAGES

Portuguese — Native
English — Advanced (professional proficiency)

Maranguape City Hall – CE — *Back-End / Full-Stack Developer*

NOV 2024 – NOV 2025

- Developed an Employee Management and Organizational Structure System for 10,000 public servants.
- Implemented automated PDF report generation for consolidated general, salary, and geographic data.
- Standardized file upload flows using Multer + AWS S3, eliminating recurring upload issues.
- Designed hierarchical department structures using MongoDB aggregations.
- **Optimized API calls from 1.6 seconds to 50ms (32x faster)**, significantly improving user experience for thousands of daily users.
- Built scalable APIs using Node.js + Express with clean architecture, applying AI-assisted tools to accelerate development, refactoring, validation, and documentation.
